

Spatially-resolved transcriptomics meets Deep Learning: denoising omics data matrix using Optimal Transport and Graph Attention Networks

Lucas RINCÓN DE LA ROSA

02/10/2024

01.Scientific background

Single cell vs Bulk.

- **Proportion of zeros** in **bulk** RNA-seq data is usually **10–40%** (Jiang et al. *Genome Biol* 2022).
- That proportion can be as high as **90%** in single cell RNA sequencing (**scRNA-seq**) data.
- The high data sparsity provoked the use of **zero-inflated** models **and** the development of **imputation methods** for reducing zeros.

Figure 2: RNA-seq AnnData example. *.X*: containing the count matrix; *.obs*: containing annotations for the cells/spots and *.var*: contains annotations for the genes. (Virshup et al. 2021)

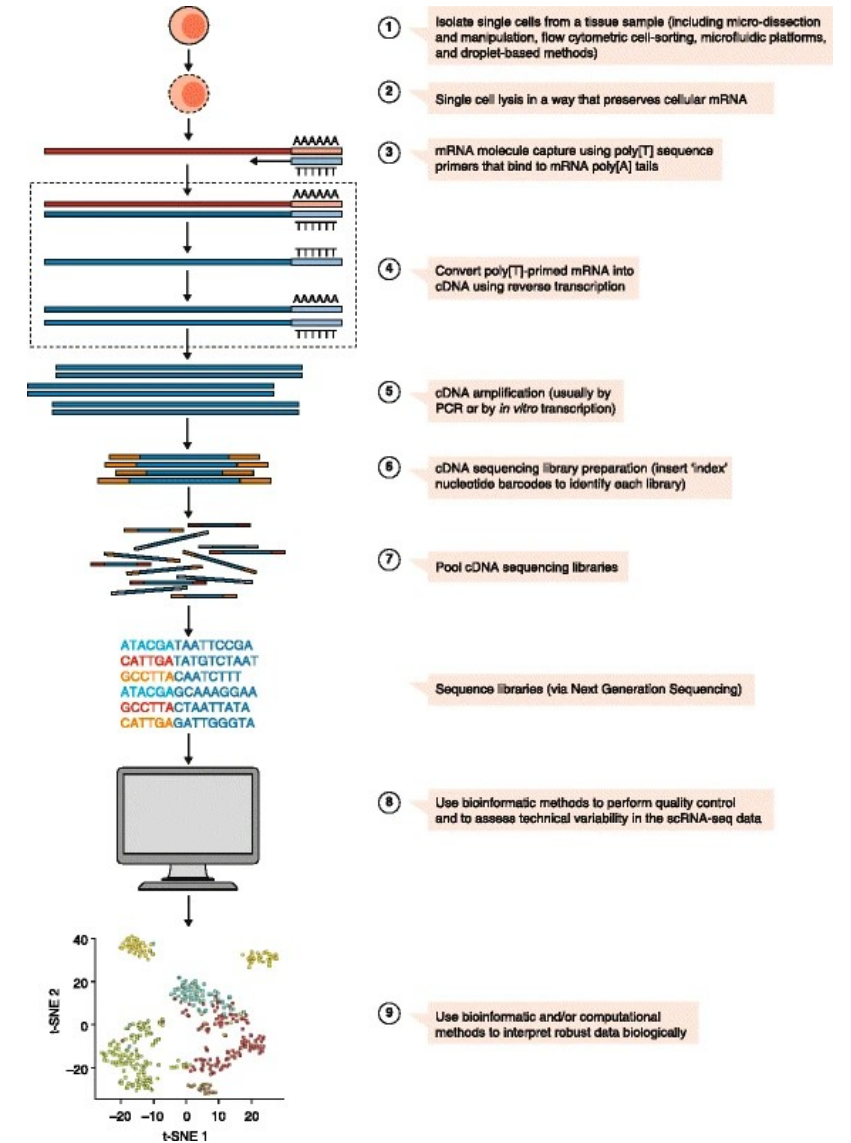

Figure 1: General workflow of single-cell RNA-sequencing (scRNA-seq) experiments (Haque et al. *Genome Med* 2017)

02.Data availability

DLPFC data by 10x Visium

Figure 3: (a) Tissue blocks for experiments. (b) Schematic representation of experiments. (Maynard et al. Nat Neurosci 2021)

Figure 4: Location of the Dorsolateral Prefrontal Cortex (Duprat 2017)

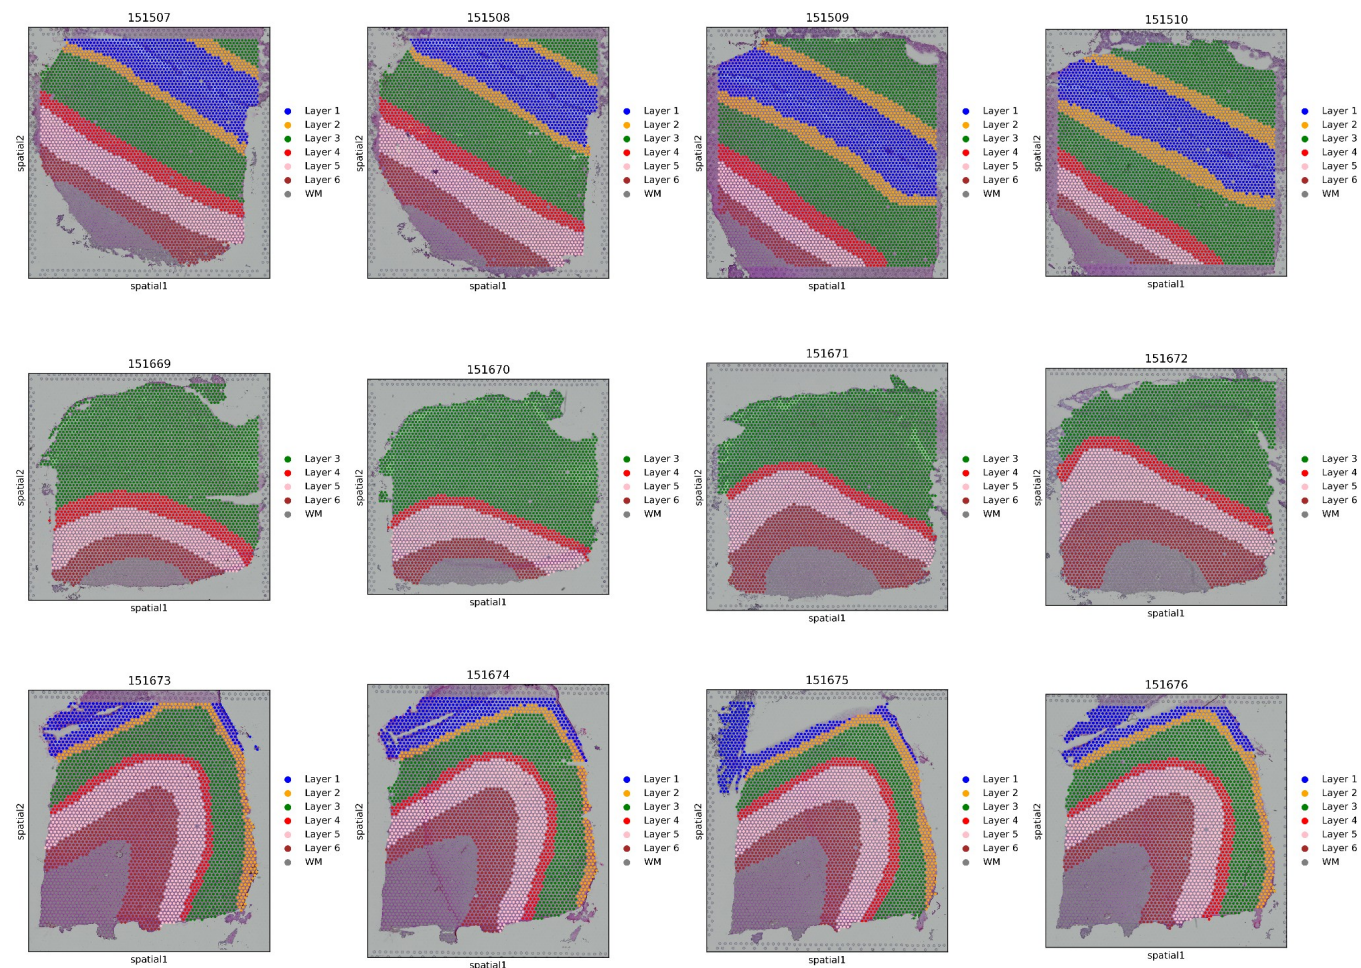

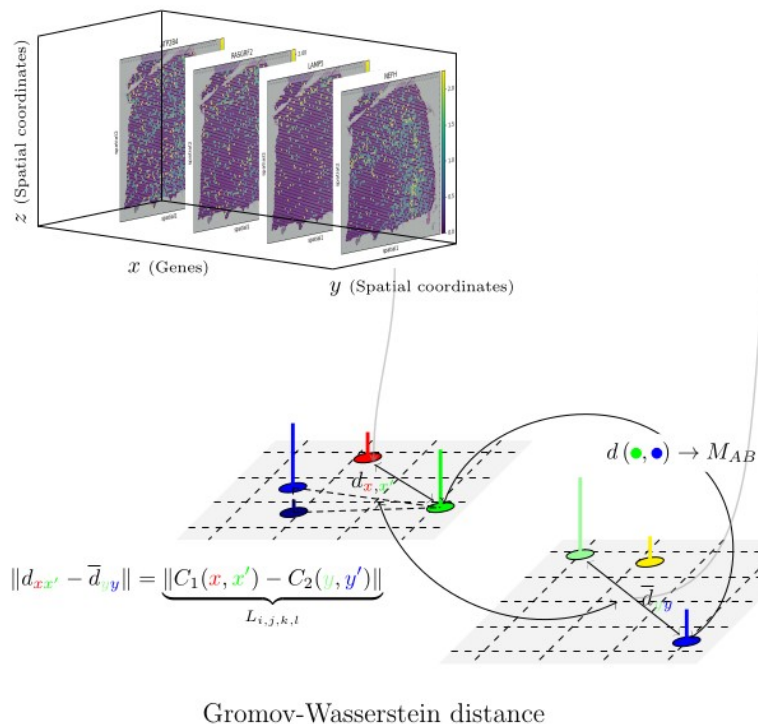

Figure 5: 12 samples from the DLPFC dataset by (Maynard et al. Nat Neurosci 2021) showing the 6 regions plus white matter.

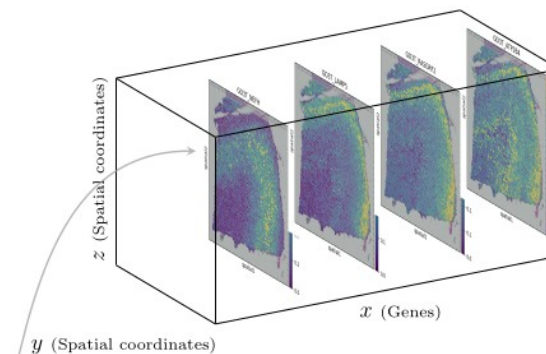

04. Proposed method

Graph with Optimal Transport, Transformers and Time diffusion (GO3T)

Raw spatial transcriptomics

Denoised spatial transcriptomics

KL Loss, MSE Loss, Autoencoder Loss
Noise Contrastive Loss, ARI Loss, NMI Loss

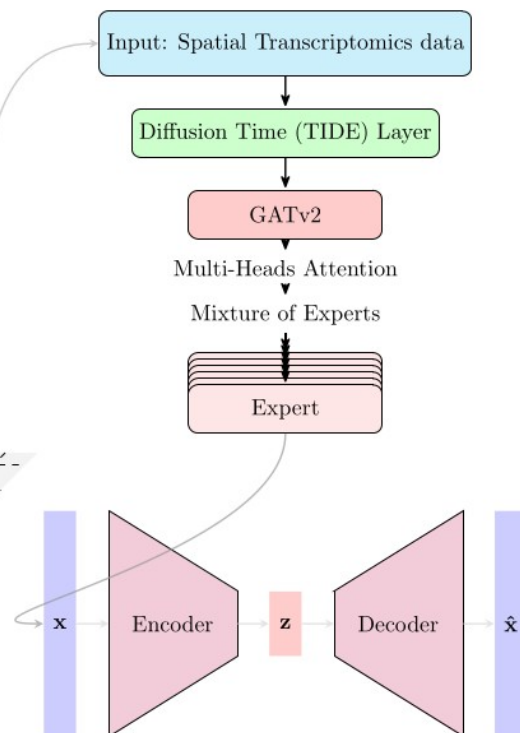

Figure 6: overview of GO3T architecture.

05.Results

Other comparisons for metrics and gene regions

Figure 8: radarplots grouped by the three metrics used (ARI, NMI and AMI) for the 12 DLPFC datasets using four common methods and ours (GO3T).

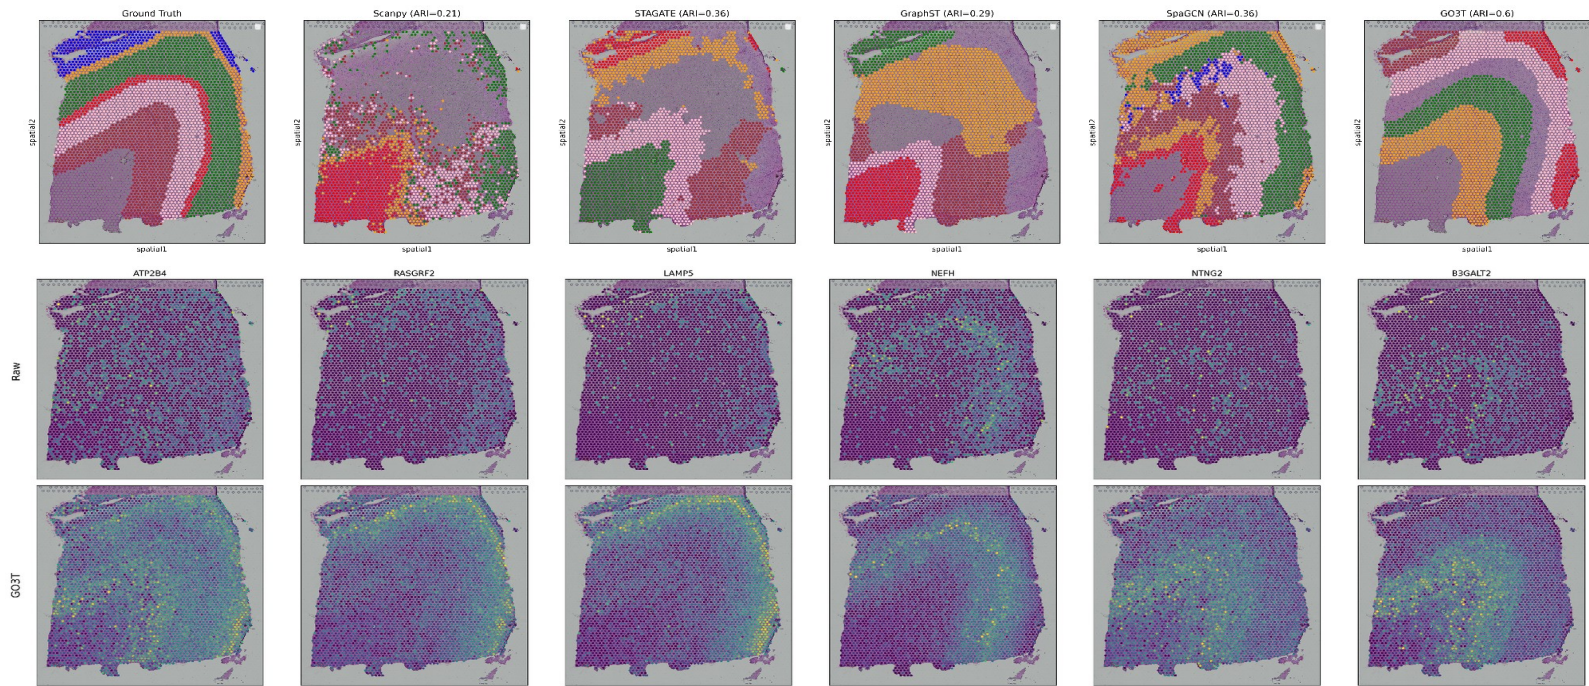

Figure 9: spatial plots for the 151673 dataset showing the ground truth regions along with the predicted ones for 4 common methods and ours (GO3T).

Figure 10: spatial plots comparing 6 gene expression using scanpy (above) and our method GO3T (below) for denoising in the 151673 dataset.

Thank you for your time
